

NX License Borrowing

A borrowed license can be used to run the NX application on a client computer while it is no longer connected to the license server. Not the entire license file will be borrowed, only the selected license features. While the license is borrowed it will remain checked out from the license server until either the borrow period expires or until the license is returned early by the user.

The license can be borrowed either by using the NX Licensing Tool or by running lmutil lmborrow in a Command Prompt.

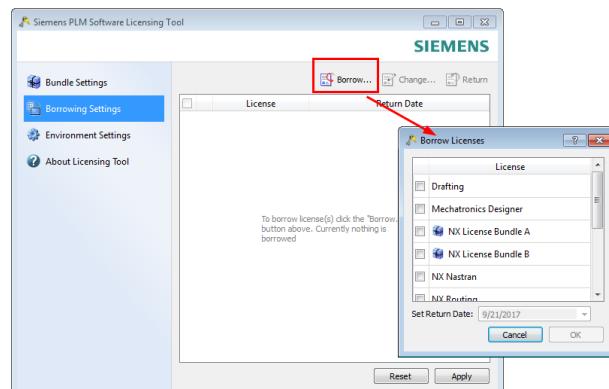

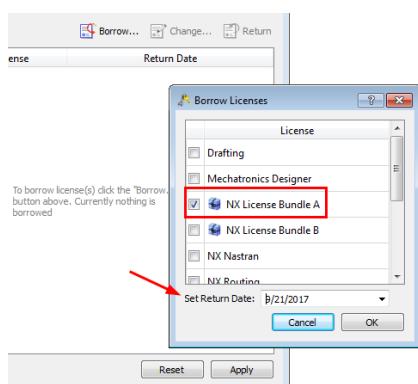

NX License Borrowing using the Licensing Tool

While connected to the network a license can be borrowed by opening the Licensing Tool:
Start → All Programs → Siemens NX x.x → (NX) Licensing Tools → Licensing Tool

Starting in NX 9.0, the Licensing Tool can be found in the %UGII_BASE_DIR%\UGFLEXLM folder.
For previous versions it was located in the %UGII_ROOT_DIR%.

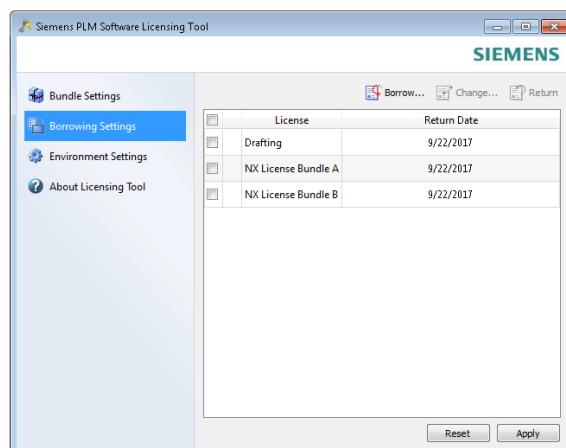

In the Borrowing Settings, select the Borrow... button to start borrowing licenses.

In the opened window select the licenses you would like to borrow and set the Return Date. After the selected Return Date the Borrowing Period will expire .The license will automatically be checked in and be available to be checked out by anyone with a network connection.

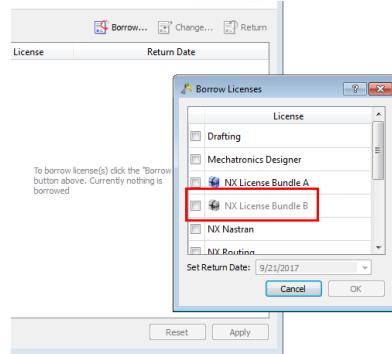

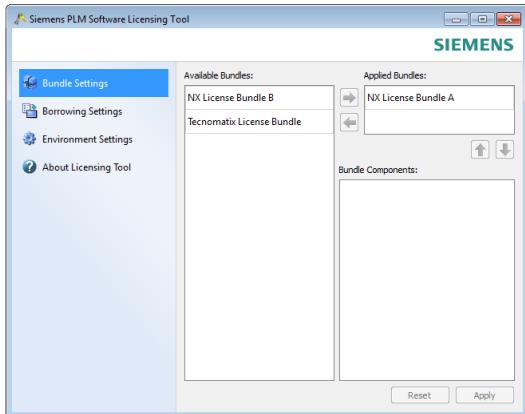

After the licenses have been selected and the Return Date has been set, press 'OK' to close the Borrow Licenses window.

In the Licensing Tool press 'Apply' to borrow the licenses. The licenses will now be checked out from the license server.

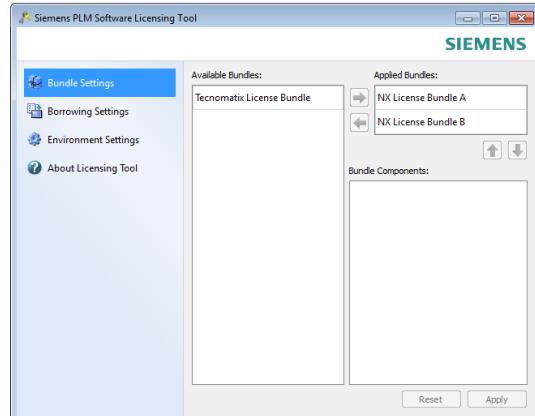

Some of the licenses can be Packaged license bundles. To be able to use these licenses the License Bundle needs to be selected. The Packaged licenses are indicated with the 'package' symbol.

Where the Package and license are grey
this means the Bundle has not yet been selected.

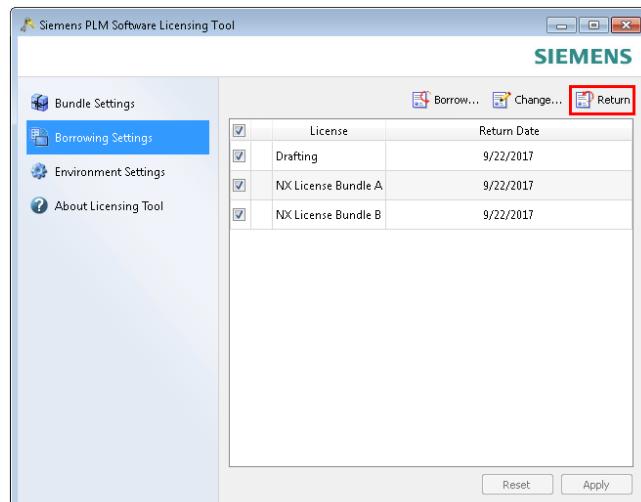

Before closing the Licensing Tool please open the Bundle Settings to select the license bundle.

After the Borrow Period expires the licenses will automatically be returned to the license server.

It is also possible to manually return the licenses early. To return the licenses early a connection to the license server is required.

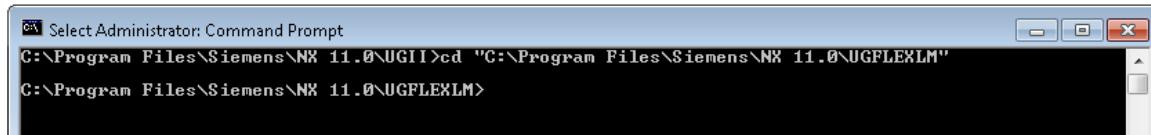

Open the Borrowing Settings of the Licensing Tool, select the licenses to return and press the 'Return' button.
After pressing the 'Apply' button the licenses will be returned.

NX License Borrowing using the Command Prompt

To borrow the license using the Command Prompt you use lmutil lmborrow to set the Return Date for the licenses to be borrowed. Then while connected to the network you run all the required NX applications and functions for which you want to borrow the licenses.

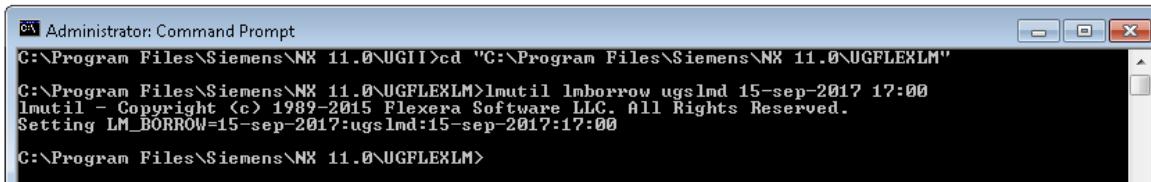

To start borrowing open an (NX) Command Prompt and Change Directory to the %UGII_BASE_DIR%\UGFLEXLM folder.

```
C:\> Select Administrator: Command Prompt  
C:\>Program Files\Siemens\NX 11.0\UGII>cd "C:\Program Files\Siemens\NX 11.0\UGFLEXLM"  
C:\>Program Files\Siemens\NX 11.0\UGFLEXLM>
```

Run lmutil lmborrow to set the Return Date. The format is {all|vendorname} dd-mmm-yyyy [hh:mm]
For instance:

```
lmutil lmborrow ugslmd 15-sep-2017 17:00
```

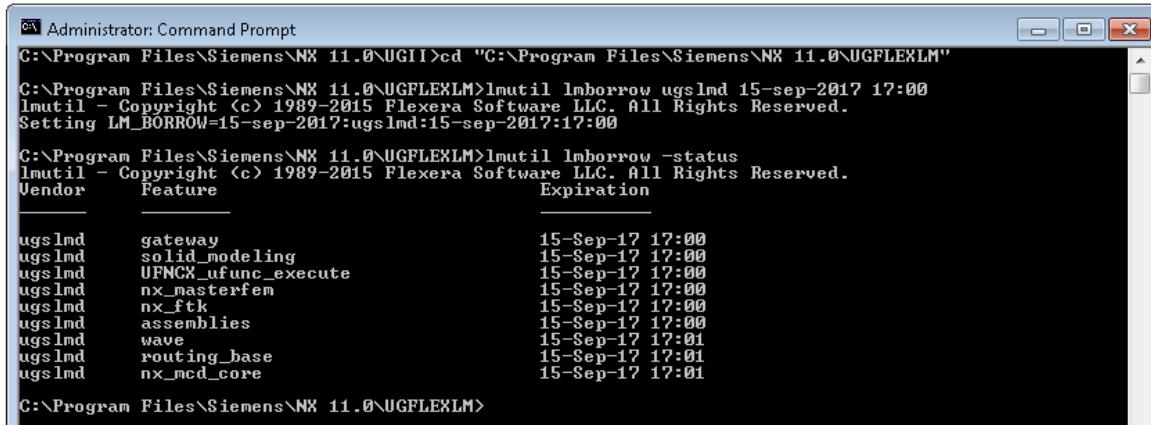

```
C:\> Select Administrator: Command Prompt  
C:\>Program Files\Siemens\NX 11.0\UGII>cd "C:\Program Files\Siemens\NX 11.0\UGFLEXLM"  
C:\>Program Files\Siemens\NX 11.0\UGFLEXLM>lmutil lmborrow ugslmd 15-sep-2017 17:00  
lmutil - Copyright <c> 1989-2015 Flexera Software LLC. All Rights Reserved.  
Setting LM_BORROW=15-sep-2017:ugslmd:15-sep-2017:17:00  
C:\>Program Files\Siemens\NX 11.0\UGFLEXLM>
```

LM_BORROW is set for vendor daemon 'ugslmd'.

Now start NX and run all required application and features for which the licenses need to be borrowed. All license features that are checked out with LM_BORROW set will be borrowed.

In the Command Prompt use lmutil lmborrow -status to check which license features have been borrowed.

```
C:\> Select Administrator: Command Prompt  
C:\>Program Files\Siemens\NX 11.0\UGII>cd "C:\Program Files\Siemens\NX 11.0\UGFLEXLM"  
C:\>Program Files\Siemens\NX 11.0\UGFLEXLM>lmutil lmborrow ugslmd 15-sep-2017 17:00  
lmutil - Copyright <c> 1989-2015 Flexera Software LLC. All Rights Reserved.  
Setting LM_BORROW=15-sep-2017:ugslmd:15-sep-2017:17:00  
C:\>Program Files\Siemens\NX 11.0\UGFLEXLM>lmutil lmborrow -status  
lmutil - Copyright <c> 1989-2015 Flexera Software LLC. All Rights Reserved.  
Vendor      Feature          Expiration  
ugslmd     gateway          15-Sep-17 17:00  
ugslmd     solid_modeling    15-Sep-17 17:00  
ugslmd     UFNCK_ufunc_execute 15-Sep-17 17:00  
ugslmd     nx_masterfem     15-Sep-17 17:00  
ugslmd     nx_ftk           15-Sep-17 17:00  
ugslmd     assemblies        15-Sep-17 17:00  
ugslmd     wave              15-Sep-17 17:01  
ugslmd     routing_base      15-Sep-17 17:01  
ugslmd     nx_mcd_core       15-Sep-17 17:01  
C:\>Program Files\Siemens\NX 11.0\UGFLEXLM>
```

As soon as all required license features have been borrowed run lmutil lmborrow -clear in the Command Prompt to remove LM_BORROW. This will not return the already borrowed license features. It will only remove LM_BORROW, preventing other features from being borrowed.

```

Administrator: Command Prompt
C:\Program Files\Siemens\NX 11.0\UGII>cd "C:\Program Files\Siemens\NX 11.0\UGFLEXLM"
C:\Program Files\Siemens\NX 11.0\UGFLEXLM>lmutil lmborrow ugslmd 15-sep-2017 17:00
lmutil - Copyright <c> 1989-2015 Flexera Software LLC. All Rights Reserved.
Setting LM_BORROW=15-sep-2017:ugslmd:15-sep-2017:17:00

C:\Program Files\Siemens\NX 11.0\UGFLEXLM>lmutil lmborrow -status
lmutil - Copyright <c> 1989-2015 Flexera Software LLC. All Rights Reserved.
Vendor      Feature          Expiration
_____
ugslmd      gateway          15-Sep-17 17:00
ugslmd      solid_modeling   15-Sep-17 17:00
ugslmd      UFNCK_ufunc_execute 15-Sep-17 17:00

lmutil - Copyright <c> 1989-2015 Flexera Software LLC. All Rights Reserved.
Clearing LM_BORROW

C:\Program Files\Siemens\NX 11.0\UGFLEXLM>

```

The Command Prompt can now be closed.

If you would like to return the borrowed licenses early a network connection is required.

Run lmutil lmborrow -return to return the borrowed licenses.

The format is [-c licfile] [-d display_name] [-fqdn] [-vendor name] feature

For instance:

```
lmutil lmborrow -return -c port@host -d %computername%0.0 gateway
where port@host is the port and hostname of the license server.
```

```

Administrator: Command Prompt
C:\Program Files\Siemens\NX 11.0\UGII>cd "C:\Program Files\Siemens\NX 11.0\UGFLEXLM"
C:\Program Files\Siemens\NX 11.0\UGFLEXLM>lmutil lmborrow -return -c 28000@nlutverhoeve05 -d %computername%0.0 gateway
lmutil - Copyright <c> 1989-2015 Flexera Software LLC. All Rights Reserved.
Feature "gateway" returned successfully.

C:\Program Files\Siemens\NX 11.0\UGFLEXLM>

```

Run lmutil lmborrow -h for the help.

```

Administrator: Command Prompt
C:\Program Files\Siemens\NX 11.0\UGII>cd "C:\Program Files\Siemens\NX 11.0\UGFLEXLM"
C:\Program Files\Siemens\NX 11.0\UGFLEXLM>lmutil lmborrow -h
lmutil - Copyright <c> 1989-2015 Flexera Software LLC. All Rights Reserved.

Usage: lmborrow <feature> dd-mmm-yyyy [hh:mm]      <To borrow>
       lmborrow -status                         <Report features borrowed to this node>
       lmborrow -purge                          <Remove expired features>
       lmborrow -purge -status                  <Remove expired features and Report non-expired features>
       lmborrow -clear                         <Changed your mind -- do not borrow>
       lmborrow -return [-c licfile] [-d display_name] [-fqdn] [-vendor name] feature
                                         <Return feature early>
       lmborrow -help                           <Display usage information>
