

DIGITAL INDUSTRIES SOFTWARE

# Plan for service

Use service lifecycle analytics to grow your revenue streams

Service lifecycle analytics is a comprehensive digital solution for machine suppliers, part of the Siemens Xcelerator business platform of software, hardware and services. As maintenance software, service lifecycle analytics makes it easier to leverage service data and improve machine performance.

## Market trends

Disruptive influences

Smarter factories

Business model changes

## Industry challenges

Unplanned downtimes

Unclear service instructions

Poor visibility into a machine's lifecycle

## Industry solutions

With a plan for service approach, machine suppliers can use comprehensive maintenance software to overcome market trends and industry challenges, resulting in:

**Fewer unplanned downtimes**

**More accurate service instructions**

**Improved service-design processes**

## Plan for service benefits
