DIGITAL INDUSTRIES SOFTWARE

Service delivery

Use service lifecycle analytics to grow your revenue streams

Service lifecycle analytics is a comprehensive digital solution for machine suppliers, part of the Siemens Xcelerator business platform of software, hardware and services. It provides asset monitoring features, making it easier to leverage service data and improve machine performance.

## Market trends

Disruptive influences

Smarter factories

Business model changes

Industry challenges

Incorrect service instructions

Inaccessible machine information

Little-to-no visualization guidance

Industry solutions

With a digitalized service delivery approach, machine suppliers can use asset monitoring and design data to overcome market trends and industry challenges.

✓ **Ensure service work instructions match product variants**

✓ **Access service data with IBM Maxico, Salesforce Service Cloud and low-code apps**

✓ **Complete service with AR, VR and MR tools**

Plan for service benefits

85% Improvement in technician utilization

60% Of companies report low-code platforms increase revenues

30% Increase in technician productivity
