

#####

## How it works:

## The following macro codes can be used to display helper texts in a Polarion LiveDoc.

## With a button it is possible to toggle if the text should be shown or not.

## You can use this macro to include instructions or additional information into your Live Doc.

##

## How to install:

## you can copy the whole content of this file into a LiveDoc wiki block. It will show you an example text.

## The macro #drawHalperText is only needed once per document.

## You can use the #drawHelperText(\$text) macro to show such a button and helper text at each LiveDoc place you want.

#####

#####

## This Macro renders a helper text that can be toggled

##

## Parameter:

## - \$p\_text: HTML-String - The Text to be displayed

#####

```
#macro( drawHelperText $p_text )
```

```
  #if( !$g_helperCssLoaded )
```

```
    #set( $g_helperCssLoaded = true )
```

```
    {pre}
```

```
      <style>
```

```
        .helper{
```

```
          color:blue;
```

```
          padding-top:5px;
```

```
          position:relative;
```

```
          margin-bottom:4px;
```

```
          line-height:1.7;
```

```
          font-style:italic;
```

```
}

.helperToggle{
padding:0;
padding-left:20px;
border: 1px solid #888;
font-size:.7em;
width:90px;
text-align:center;
cursor:pointer;
font-weight:bold;
background-color:#eee;
border-radius:3px;
margin-left:auto;
background-image:url('/polarion/ria/images/fields/generic.png');
background-repeat:no-repeat;
background-size: 25px 22px;
background-position: 2px 0;
}
</style>
{/pre}
{show:wiki}
<style>
.helper{
border-top:1px dashed #88F;
border-bottom:1px dashed #88F;
}
</style>
{show}
#end

#set( $defaultDisplay = "none" )
```

```
#if ($document.getStatus == $document.getInitialAction.getTargetStatus )
  #set( $defaultDisplay = "block" )
#end
<div style="position:relative;">
  ##inline style is needed for word export
  <div class="helper" style="display:$defaultDisplay;color:blue;font-style:italic">$p_text</div>
  {show:wiki}
  <div class="helperToggle" onclick="jQuery(this).parent().find('.helper').toggle()">TOGGLE
HELPER</div>
  {show}
</div>
#end

#####

## Setup and call - HTML is allowed

#####

#set( $text = "This is a demo-helper-text. It will be visible by default if its document is in the initial
status '<b>$document.getInitialAction.getTargetStatus.getName</b>' and hidden
otherwise.<br><br>Go ahead and toggle its visibility." )

#drawHelperText( $text )
```
