

5 Adventskalender 2024

5.1 Farben-Trilogie

5.1.1 "What a colorful christmas !" Part 1 : The renewing.

"This year it's important to me to make Polarion for christmas look more colorful than ever !", Santa said to the elves.

"But Santa, Polarion already IS colorful for years now..."

"WHAT ?"

"It's true, look : for every enumeration option, the admin can select a specific colour, be it the item type, status, or any enum custom field !"

"So why the heaven I don't see that colors anywhere then in Polarion ?????"

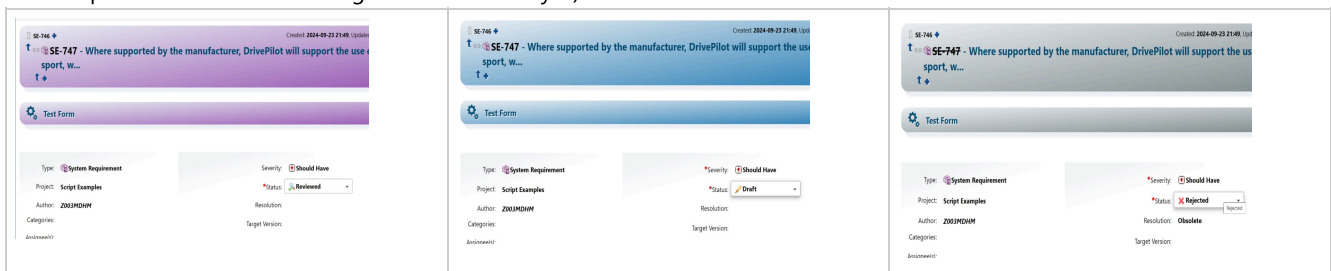

"Errrr...."

"Ok, that's it ! You guys now go to the garage, grab yourself paint pots and brushes, and bring all these wonderful colors into the Polarion UI !"

And so they ran...

"... And guys, we haven't painted it for a while now.... so if you are getting your fingers dirty anyway, can you please also make it look a bit more... you know...friendly... :-)"

And in the morning, they returned with a Velocity Workitem Form extension which makes your items present in the color for their respective state - and looking fresh and friendly :-)

Here's the code :

```
## fetch the value of the colour from where you want
## it must be in a HTML-typic format like the RGB format of "#RRGGBB", so that #FF0000 is full
red
##to take it from any enum field like (type or status), use this :
#set($desiredColor = $object.getValue('status').getProperty('color'))
#set($polarionDefaultBackgroundColor = "#EBF0F5")
```

```
<style>
.polarion-WorkItem-TitleSection, .polarion-JSPreviewPanelTitle, .polarion-
JSPreviewPanelTitleClick {
border-radius: 15px;
box-shadow: 8px 8px 3px $polarionDefaultBackgroundColor;
background-color: $polarionDefaultBackgroundColor; /* fallback for browsers which do not
support this */
background-image: linear-gradient(to bottom right,
$polarionDefaultBackgroundColor, $desiredColor);
}
</style>
```

How to use it in your Polarion ? See : https://docs.sw.siemens.com/en-US/doc/230235217/PL20240424963191224.polarion_help_sc.xid1465510/xid2131889

Have a colorful christmas !
