

DIGITAL INDUSTRIES SOFTWARE

Solid Edge Design Configurator Connect

Bring real-time product configuration directly to customers

Benefits

- Deliver instant online product configuration
- Connect engineering processes with sales and marketing
- Streamline design workflows
- Faster time to market for customized products
- Improve quality and accuracy
- Accelerate sales, build trust and connect with customers

Summary

Solid Edge® Design Configurator Connect software is a user friendly, web-based solution that delivers instant online product configuration, allowing your customers to quickly configure a product that meets their specific requirements. This solution, which is part of the Siemens Xcelerator business platform of software, hardware and services, connects your engineering processes with sales and marketing to streamline design workflows and quickly deliver customized products and sales documentation to customers.

Instantly configure and deliver customizable products

In a constantly evolving market that requires quick response time to changing trends, delivering unique products can be time-consuming, costly and prone to errors. With Solid Edge Design Configurator Connect, you can quickly and easily manage the most complex pricing and product configuration – all within a secure, online browser.

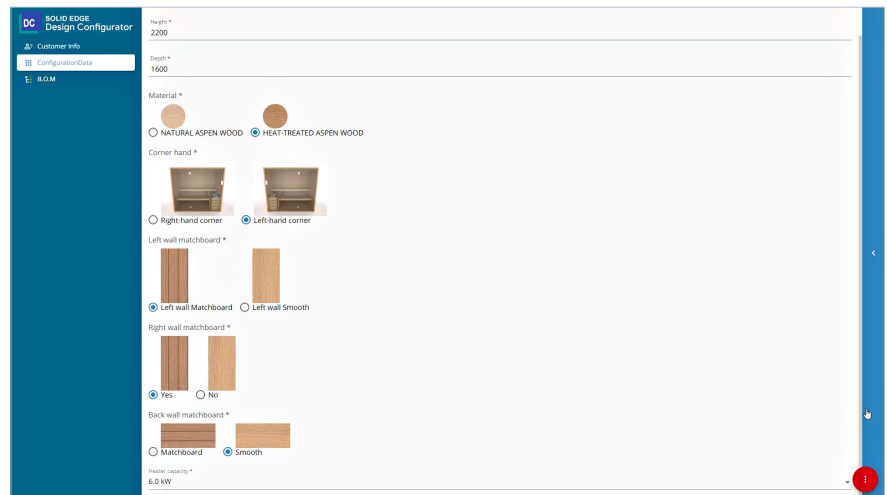

SIEMENS

solidedge.siemens.com

Features

- User friendly, web-based solution
- Automatically generate sales documentation
- Quickly configure, price and deliver customized quotes
- Reduce errors and time spent on estimates
- No-code authoring tool
- Centralized, secure repository of product designs

By creating a new catalog for a product line, sales teams can design a unique product based off customer preference, assuring greater accuracy and flexibility. The catalog can be customized with important details, such as currency, price, dates, part number and other relevant information required by and for the customer. The ability to import Microsoft Excel® files using Solid Edge Design Configurator Connect allows you to automatically link specific details from the file with your product line, and the web configuration begins as you import the rules and fields straight from your configured assembly to the browser.

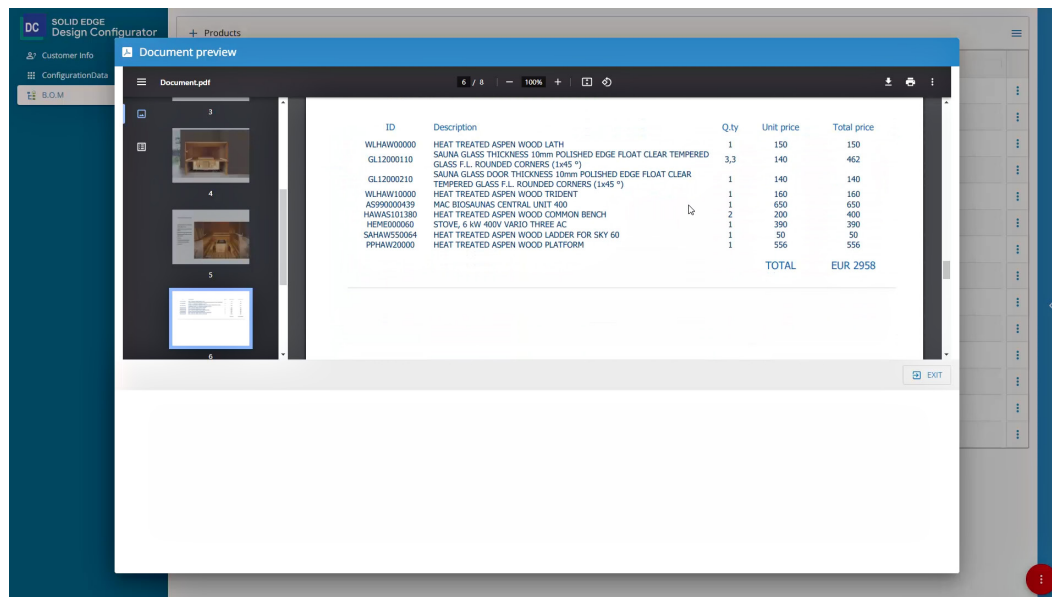

Forms within the catalog can be easily configured for facilitating sales processes as well. With the ability to add fields, including offer ID numbers, dates, customer name and address, your sales teams can configure, price and deliver customized quotes to accelerate sales, build trust and connect with your customers.

Automatically generate sales documentation

Solid Edge Design Configurator Connect enables you to connect your engineering processes with sales and marketing and automatically generate sales documentation from configured products to quickly deliver accurate, customized sales quotes. Generated sales documentation can include a bill of materials (BOM), catalog information, commercial documentation and 3D models.

After configuring the desired product for the customer, the product and its associative catalog and price are used as the basis for the customized sales documentation. The BOM and requested sales quotes can then be automatically generated from the configured model. Standard templates can be defined for your sales team to use for sales quotes and contract documents, ensuring the inclusion of all important information. These templates can be customized with various layouts, images, logos and customer information alongside the

configured product. The standardization of your sales documentation is crucial for maintaining a strong, reliable company image and reputation.

Extending value

The Solid Edge portfolio is an integrated set of powerful, comprehensive and accessible tools that advance all aspects of the product development process. Solid Edge addresses today's complexity challenges with automated digital solutions that cultivate creativity and collaboration.

By harnessing the latest innovative technologies in mechanical and electrical design, simulation, manufacturing, publications, data management and cloud-based collaboration, using Solid Edge dramatically shortens time-to-market, provides greater production flexibility and significantly reduces costs with its collaborative and scalable solutions.

Minimum system requirements

- Operating System: Windows Server (2019 or later)
- CPU: 4 vCore @ 2.5GHz
- RAM: 16GB
- Disk Space: 50GB
- Internet connection: If the software is designed to be exposed on the public internet or interact with remote clients, a stable internet connection is required. If the software is intended solely for local intranet use within a closed network environment, an internet connection may not be mandatory.
- Solid Edge Design Configurator: The installation of Solid Edge Design Configurator Connect requires that Solid Edge Design Configurator is also installed on your machine.
